Outline

1. What is intimate partner violence
2. What is the relationship between intimate partner violence and substance use
3. What are the effects of intimate partner violence on mothers and children
4. What are the implications for clinical practice
Intimate Partner Violence: What is it?

“refers to any behavior within an intimate relationship that causes physical, psychological or sexual harm to those in the relationship” – Garcia-Moreno et al., 2012, p.5
Intimate Partner Violence: Global Problem

1 in 3 women throughout the world will experience physical and/or sexual violence by a partner or sexual violence by a non-partner.

All statistics can be found in the report entitled Global and regional estimates of violence against women: Prevalence and health effects of intimate partner violence and non-partner sexual violence, by the World Health Organization, the London School of Hygiene & Tropical Medicine, and the South African Medical Research Council. Visit here: http://www.who.int/reproductivehealth/publications/violence/gwvi/en/index.html
